own API. Raster and vector graphics support, either client-side or server-side. Raster Raster is the core function that provides all the functionality needed to read or render (draw) images or bitmap on screen. AutoCAD can render raster images (bitmap) and vector images (drawing) through the following standard APIs: AutoCAD DXF - AutoCAD LT - AutoCAD Architecture - AutoCAD Electrical - AutoCAD Civil 3D - AutoCAD Map 3D - Raster consists of layers and each layer consists of drawing commands. B and

M (Block and Mask) –Raster-based technology for raster graphics creation and editing. The B and M commands enable objects to have graphical effects applied to them in a similar fashion to how inks and paints are applied to a page in a printer.

Draw –Use the Draw command to draw objects in the current drawing. Line – Use the Line command to draw lines. Polyline – Use the Polyline command to draw polylines. Circle – Use the Circle command to draw circles. Ellipse – Use the Ellipse command to draw ellipses. Arc – Use the

Arc command to draw arcs. Text – Use the Text command to draw text. Dimstyle – Use the Dimstyle command to set the properties of a dimension style. Polystyle – Use the Polystyle command to set the properties of a polyline style. Ellipsestyle – Use the Ellipsestyle command to set the properties of an ellipse style. Vector Vector is the core function for creating or editing objects in vector graphics. wall segments, components, or palettes anywhere on a drawing, instantly create and modify their scale, and keep all the information you need. (video: 1:55 min.)

3D Visuals: Create building blocks with motion and rendering to quickly draw and modify 3D models. (video: 5:45 min.)

Freehand: Bring your design ideas to life without being constrained by toolpath or visual boundaries. This allows you to explore your ideas in an unrestricted workspace and create fresh, unexpected designs. (video: 1:00 min.)

Deep Learning:

Create 3D models by exploring your design ideas in a free-form 3D environment.

(video: 2:20 min.) Part Image: Use the native 3D image stream of your 3D part to create a 2D representation of your part.

(video: 5:30 min.) Part Design: Define parameters of your part design including aspect ratio, fit, fillet, roundover, arcs, and other custom constraints. (video: 3:15 min.)

Animation: Quickly simulate your design changes with animation, automatically redrawing parts as you move, scale, rotate, or translate. (video: 1:20 min.) Reveal: See

information in your model that is not normally visible in the Drafting window, such as context and annotation messages, or hidden information, such as inspection fields, alternate styles, or other applications. (video: 4:45 min.) PDF Embedded: Convert your PDFs into a native drawing format. Use native annotation support and other tools to modify the existing PDF, including custom annotations, text, graphics, and hyperlinks. (video: 3:00 min.) UFO: Add an area where you can draw objects and have them recognized as “unknown objects”, but
