A revolutionary new approach to computer graphics AutoCAD Product Key is the best known in a category of computer-aided design (CAD) programs that

originated in the late 1970s. CAD programs use computers to simulate the design process of a human draftsman. The human design process is broken down into individual steps, called commands, which the CAD software performs on a drawing to create a digital model that

resembles a print or electronic version of the actual physical drawing. Traditional computer graphics technology, which uses raster display, was initially unable to match the speed and quality of traditional graphics tools used in CAD. To give the CAD process a boost, computer

graphics technology had to evolve, first using vector graphics technology, and eventually, to present-day, using 3D graphics technology. To create a 3D CAD model, the CAD operator's drawing is not only sketched on paper, but the paper is scanned by a digital camera to create a

digital 3D model that is then further refined using CAD tools. AutoCAD was the first successful CAD program to employ 3D graphics. As a result of the new graphics technology, the speed and quality of the original AutoCAD desktop app was improved.

Improvements in AutoCAD graphics technology have since spawned the emergence of other CAD programs that use 3D graphics technology. For example, a competing CAD program released in 1996, SolidWorks, offers a wide range of features and a robust workflow using CAD

modelling, review and
documentation
applications.

SolidWorks uses more
than 1 million triangles
per second (more than
AutoCAD). Another
CAD program, NX,
offers a wide range of
engineering design and
manufacturing features
using 3D graphics.
Although AutoCAD is

available in both desktop and mobile versions, it was the desktop app that initially found the greatest success. (See "Ecosystems", below, for more information about the AutoCAD ecosystem.) The desktop app has been a standard part of the AutoCAD ecosystem

since its inception.

Integrated design refers
to a design practice in
which the design is
conceived as a single
object, not broken down

into its component parts. For example, a bathroom design is not broken down into components such as "wall," "door," and "shower," but is a "bathroom." When a computer is used to perform the design process, a "computer-aided" or "computer-based
