KML stands for Key Macro or Key Macro Layer. It is a file format for mobile mapping applications, created by Google for uploading geospatial data. KeyMacro files

consist of a KeyMacro topology and a KeyMacro user-defined-macro. KeyMacro user-defined-macro's are used for adding additional data to the KeyMacro topology. It is not a requirement for the KML files to be hosted online. You can use KMZ files for Google-Earth. These files contain geographical data in a

flattened and compressed format (level 0). You can also export your NMEA-GPS logs to KMZ files using NMEA-Logger for Android. Your NMEA-GPS log file data will then be visible in Google-Earth and in other applications that are capable of loading KMZ files. Features:

- Convert to KMZ-file
- Import to Google-Earth
- Export to KMZ
